Abstract (Basic): JP 1045131 A

Semiconductive wafer is brought into contact with supercritical carbon dioxide or liquefied carbon dioxide to be washed, and then semiconductive wafer is brought into contact with carbon dioxide including at least one kind of substance having oxygen, or supercritical carbon dioxide gas similar to carbon dioxide gas, to oxidise Si surface of semiconductive wafer.

Washing and oxidising are performed in one tank. Substance having O is O<sub>2</sub>, O<sub>3</sub>, H<sub>2</sub>O or H<sub>2</sub>O<sub>3</sub>. Supercritical carbon dioxide gas or liquefied carbon dioxide gas used in washing includes at least one kind of substance having O.

USE/ADVANTAGE - Number of times of contact with air in clean room, of semiconductive wafer can be reduced, so that contamination of wafer by air can be decreased, and yield rate in mfr. of semiconductor, can be improved. Washing and oxidising can be performed in one process, so that mfr. is simplified.
